Q1

Which of the following describes immersion from a systems perspective?

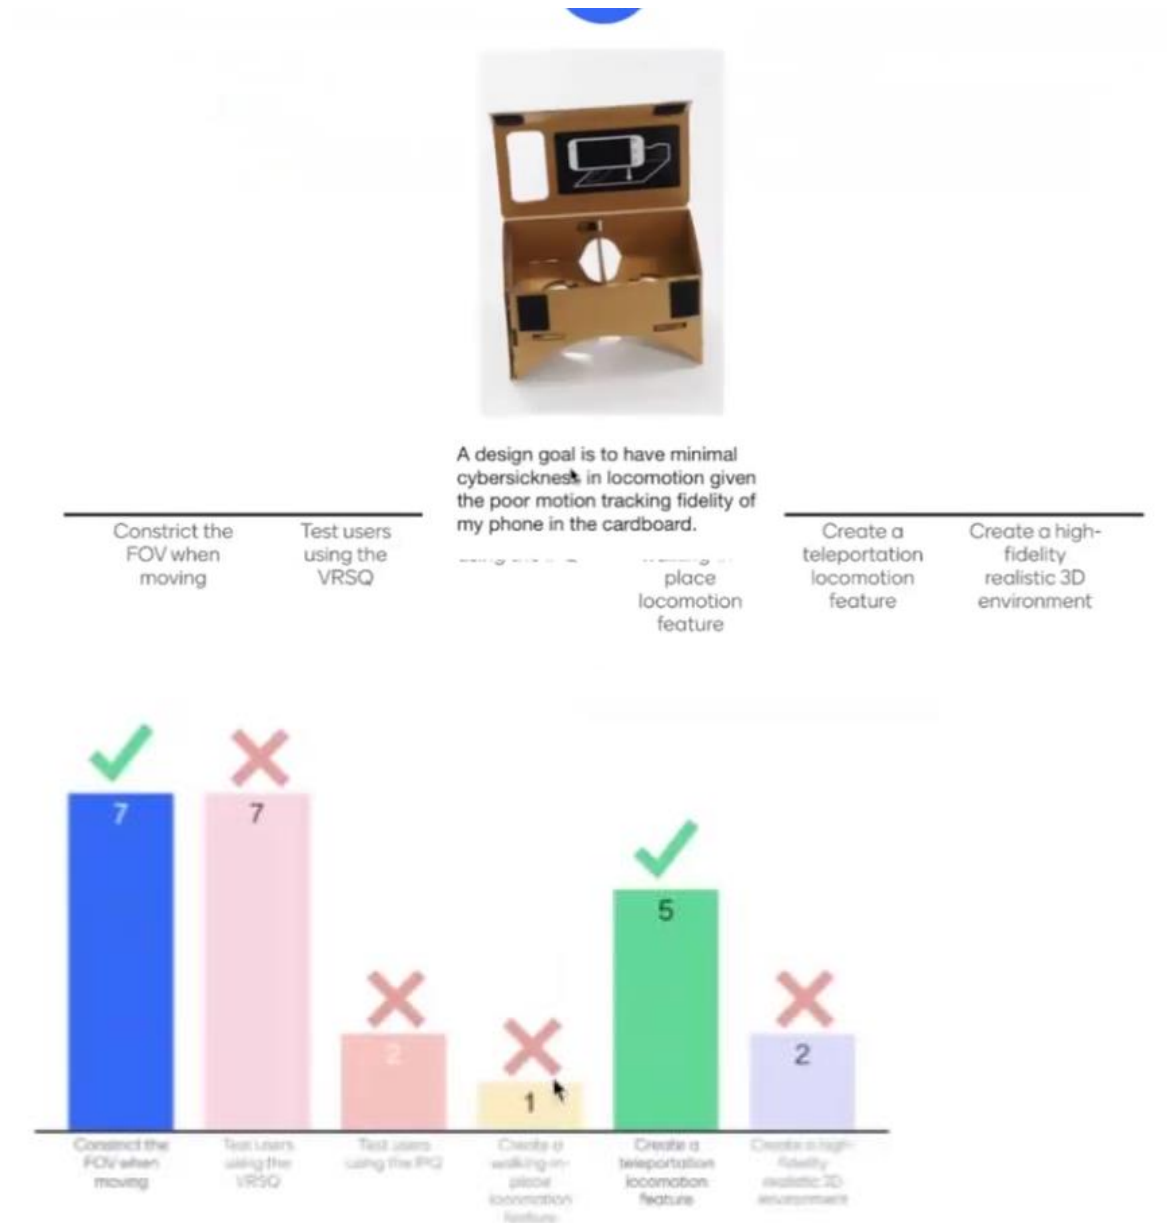

Wide FOV	Higher spatial presence	Teleportation feature	High-fidelity graphics	Lower cybersickness	6-DOF inside-out tracking
✔ 5	✖ 6	✔ 1	✔ 10	✖	✔ 2
Q2

Don't have lol

Q3

Which of the following implementations will this design translate into?

A design goal is to have minimal cybersickness in locomotion given the poor motion tracking fidelity of my phone in the cardboard.

Constrict the FOV when moving	Test users using the VRSQ		place locomotion feature	Create a teleportation locomotion feature	Create a high-fidelity realistic 3D environment

| Constrict the FOV when moving	Test users using the VRSQ	Test users using the PFQ	Create a walking-in-place locomotion feature	Create a teleportation locomotion feature	Create a high-fidelity realistic 3D environment
7 ✓	7 ✗	2 ✗	1 ✗	5 ✓	2 ✗

/hat data collection methods can be ppropriate here?

A design goal is to have minimal cybersickness in locomotion given the poor motion tracking fidelity of my phone in the cardboard.

Let users fill in the IPQ	Let users fill in the VRSQ	Let users fill in the FSS	Perform semi-structured interviews with users	Create telemetry tracking mechanisms to observe users
✗	✓ 11	✗	✓ 4	✓ 4

Q5

Which of the following implementations will this design translate into?

A design goal in our VR Space Simulator is for users to feel like they are "there" in the space shuttle out in space (yes the zero-gravity kind).

Which of the following implementations will this design translate into?

- Constrict the FOV when moving
- Test users using the VRSQ
- Create a zero-gravity arena that simulates physical weightlessness
- Create a walking-in-place location feature
- Create a teleportation locomotion feature
- Create a high-fidelity realistic 3D environment
- Create gamification features to guide users through the experience

▼ Answer
Create a zero-gravity arena that simulates physical weightlessness
Create a high-fidelity realistic 3D environment

What data collection methods can be appropriate here?

A design goal in our VR Space Simulator is for users to feel like they are "there" in the space shuttle out in space (yes the zero-gravity kind).

What data collection methods can be appropriate here?

- Let users fill in the IPQ
- Let users fill in the VRSQ
- Let users fill in the FSS
- Perform semi-structured interviews with users
- Create telemetry tracking mechanisms to observe users

▼ Answer

Let users fill in the IPQ

Perform semi-structured interviews with users

Create telemetry tracking mechanisms to observe users

Which of the following implementations will this design translate into?

VR Gallery

[illegible body text]

A design goal is for users in our VR museum app to have a smooth engaging experience in which they naturally know what to do in each step of the experience.

Which of the following implementations will this design translate into?

- Create a walking-in-place location feature
- Create a teleportation locomotion feature
- Create a high-fidelity realistic 3D environment
- Create a finger-tracked hand gestures to inspect museum artifacts
- Create gamification features to guide users through the experience

▼ Answer
Create gamification features to guide users through the experience

What data collection methods can be appropriate here?

VR Gallery

[illustrative app screenshot text illegible]

A design goal is for users in our VR museum app to have a smooth engaging experience in which they naturally know what to do in each step of the experience.

What data collection methods can be appropriate here?

- Let users fill in the IPQ
- Let users fill in the VRSQ
- Let users fill in the FSS
- Perform semi-structured interviews with users
- Create telemetry tracking mechanisms to observe users

▼ Answer

Let users fill in the FSS

Perform semi-structured interviews with users

Create telemetry tracking mechanisms to observe users
